

LET'S LOOP TUCSON AND ARIZONA

If you, or a friend, have dropped out of social gatherings or decided not to take advantage of personal growth opportunities, because you cannot hear the speaker, there is hope!

Looping rooms with a wire, plus an amplifier and using the hearing aid Telecoil, can make it possible for the Hard of Hearing to hear with better clarity.

ALOHA provides loop demos, either in-house or at facilities, and gives a list of installers of inductive looping and other information. Visit Prof. David Myers' website for an overview of the U.S. looping initiative. <http://www.hearingloop.org>

Ask us for a list of places that have inductive looping so you can try it for yourself. Or, come to ALOHA for a demo of small and large loops, and other hearing and alerting assist devices for the hard of hearing.
